25 September 2025

Dear Lovable team,

Over the past six months I've been following Lovable's journey — and using it as a paying subscriber to build countless projects. It's the first tool that genuinely blew me away. Beyond the technology, what excites me is the vision: Lovable is redefining how software is built, and I want to be part of giving that power to millions.

I'm William, a Copenhagen-based software engineer with a passion for data and building at startup speed. My background combines founder experience with years of competitive programming (IOI, ICPC EUC) and research awards during my studies. In 2024, I also won the Danish AI Championships. Today, I'm looking for a role where I can apply these skills in a setting with real momentum and purpose. While I'm exploring opportunities worldwide, Lovable stands out as a unique chance to contribute in Europe, and I am open to relocating to Stockholm.

I bring a strong foundation in building high-performance data systems. As co-founder of an algorithmic power trading firm in Copenhagen, I was responsible for the entire trading system and its data pipelines, from architecture through to production reliability. I built ultra-fast pipelines in Rust and Python, processing thousands of exchange updates per second and ensuring microsecond-latency predictions. Over two years of 50–60 hour weeks, I combined rigorous coding, algorithm engineering, and system design with technical decision-making and the persistence required to build and operate complex real-time systems under startup conditions.

I am applying for the Senior Data Engineer role, which I believe is a perfect fit for my skills. While I don't yet have deep experience with the broader landscape of data infrastructure tools, I do have hands-on experience with databases, S3, and self-hosting. At the same time, I am open to discussing the exact shape of my role at Lovable if there's another position where my strengths in algorithms, system design, and building high-performance data pipelines would be even more valuable.

I would be thrilled to bring this background to Lovable and help build the data and analytics muscle that will guide product decisions for years to come. Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to Lovable's mission.

Best regards,
William Bille Meyling
